# Quality Assurance Lead

**Do you have what it takes to join the elite force in security or QA testing?**
**If you answered "Yes" we'd love to put you to the test!**

Canary Trap is always on the lookout for highly skilled security professionals to join our growing team. We're called upon by clients to serve as their trusted security and QA partner and take this responsibility seriously. Our team of security experts is tasked with delivering adversary-based assessments in unique, complex and challenging environments. Our customers generally require quick turnaround and a higher degree of skill and sophistication.

We're asked to participate in activities ranging from threat and adversary modelling, security architecture reviews, vulnerability research and analysis, web application security assessments and penetration testing. Canary Trap also designs and implements fully customized security awareness training programs and quality assurance testing.

Qualified candidates must possess the required certifications, expertise and experience along with interpersonal skills necessary for success.

**Job Responsibilities & Description:**

- Must be self-disciplined and organized to work in a remote capacity
- Bachelor's or Master's in Computer Science
- Thorough understanding of Agile SCRUM and Waterfall Development Processes
- Ability to work both independently and in a team environment (virtually)
- Strong planning and organizational skills involving executing on multiple priorities using strong time management skills
- Ability to act/intake user roles/responsibilities and understand their objectives
- Write and Execute the test cases (Jira, Excel, Trello, Zephyr etc.)
- Perform thorough/accurate software testing and provide approvals during development sprints, integration, release, regression and patch software development phases
- Perform functional, integration and data migration testing
- Log defects within client tracking tool in detail to replicate the result of the defect
- Perform Automation feasibility analysis and POC demonstration
- Develop Test Automation plan and strategy
- Develop/Customize Test Automation Framework

- Identify Automation candidates from regression test cases
- Publish automation development and execution status reports with stake holders
- Must possess critical thinking skills in addition to good interpersonal and communication skills.
