

- Internal Network Penetration Testing -

Uncovering security gaps within your network

SERVICE OVERVIEW

While strong external security is of paramount importance, sophisticated adversaries have found ways to circumvent your firewalls and other security controls.

Organizations must develop strong layers of internal security to mitigate the risk of these attacks. The primary objective underlying network penetration testing is to improve the security hygiene of your internal network.

Canary Trap has developed a unique methodology that's designed to simulate a real-work attack by a sophisticated adversary on the inside of your corporate network.

We aim to identify, enumerate and remediate security gaps and vulnerabilities before an adversary can locate and exploit them to cause disruption to business continuity, data theft, financial and reputational loss.

Engage Canary Trap Specialists

Complete our Scoping Questionnaire online at www.CanaryTrap.com or contact us directly by telephone or email. We look forward to understanding your unique security requirements and key business objectives.

Executive Report

An Executive Report will be delivered highlighting any identified vulnerabilities for remediation. We can be re-engaged to retest and will issue a Security Certificate upon validating the identified vulnerabilities have been fixed.

The Canary Trap Approach

- ✓ Step 1: Scope the Engagement
- ✓ Step 2: Project Kick-off
- ✓ Step 3: Commence Testing
- ✓ Step 4: Report on Findings
- ✓ Step 5: Retest
