

# Catching Vulnerabilities and Trapping Exploits

Canary Trap's elite team of security experts come armed with the tools, experience and credentials to help improve your organization's security resiliency and cyber risk posture.

## - COMPROMISE ASSESSMENT SECURITY CONTROLS -

How strong are your existing security controls?

### SERVICE OVERVIEW

A compromise assessment (security controls) aims to test how difficult it is for a sophisticated threat actor to bypass the existing security controls in place. This assessment is used to validate the strength and resiliency of existing security controls.

Use cases supporting the need for a compromise assessment (security controls) includes, but is not limited to:

- ✓ Auditing of general security controls and AD implementation
- ✓ Auditing the efficacy of your Managed Detection & Response (MDR) and/or Managed Security Services Provider (MSSP)
- ✓ Auditing the effectiveness and maturity of configurations on target devices

Our unique approach combines the following activities to ensure a robust engagement:

- Light general penetration testing on target systems, networks, web and mobile applications
- Determining the shortest path to Domain Admin access
- Determining the amount of "noise" it takes for security devices and/or your MDR/MSSP to detect, alert and (where applicable) respond

Canary Trap combines human expertise with sophisticated tools, proven methodologies and, where appropriate, threat intelligence to ensure a thorough, in-depth approach to security testing and assessments.

### Engage Canary Trap

Complete our Scoping Questionnaire at [www.canarytrap.com](http://www.canarytrap.com) or Contact Us directly by telephone or email.

### Findings Report

Canary Trap will deliver a Findings Report highlighting any identified vulnerabilities for remediation.

### The Canary Trap Approach

- ✓ **Step 1:** Define
- ✓ **Step 2:** Uncover
- ✓ **Step 3:** Report
- ✓ **Step 4:** Remediate
- ✓ **Step 5:** Retest
