CANARYTRAP

Catching Vulnerabilities and Trapping Exploits

Canary Trap's elite team of security experts come armed with the tools, experience and credentials to help improve your organization's security resiliency and cyber risk posture.

- CLOUD CONFIGURATION REVIEW -

Assess the security settings, configurations and practices within your cloud environment.

SERVICE OVERVIEW

A Cloud Configuration Review focuses primarily on the application's supporting cloud infrastructure. It provides insight into how effective the cloud application is at using a cloud provider's security controls to protect workloads. Taking it a step further we can benchmark against any compliance drivers or best practices your organization needs to adhere to.

The Canary Trap Cloud Configuration Review seeks to identify vulnerabilities, their potential impacts, and provide recommendations for remediation. A Canary Trap Cloud Security Architect will undertake a meticulous data collection process to gather all necessary details about the customer's Platform as a Service (PaaS) configurations.

Once data collection is completed, the collected data will be subjected to a rigorous examination against industry best practices and benchmarks for PaaS configurations.

The next step is to assess the impact and severity of identified risks. This involves a detailed risk evaluation process where each vulnerability's potential impact is examined. Risks are assessed based on their potential to compromise data, disrupt services, or expose the cloud environment to potential threats.

Canary Trap will compile these findings into a comprehensive Findings Report. This Findings Report will outline all identified vulnerabilities, their potential impacts and offer recommendations for remediation.

Canary Trap combines human expertise with sophisticated tools, proven methodologies and, where appropriate, threat intelligence to ensure a thorough, in-depth approach to security testing, advisory and assessments.

Findings Report

Canary Trap will deliver a Findings Report highlighting any identified vulnerabilities for remediation.

The Canary Trap Approach

- ✓ **Step 1:** Define
- ✓ **Step 2:** Assess
- ✓ **Step 3:** Report
- ✓ **Step 4:** Remediate
- ✓ **Step 5:** Retest
