

CANARY TRAP

Catching Vulnerabilities & Trapping Exploits

Canary Trap's elite team of security experts come armed with the tools, experience and credentials to help improve your organization's security resiliency and cyber risk posture.

PHYSICAL SECURITY ASSESSMENT & PENETRATION TEST

Assess your physical security controls to identify gaps, vulnerabilities and weaknesses.

SERVICE OVERVIEW

A physical security assessment systematically evaluates the security measures and vulnerabilities of a specific location, such as a building or facility, to identify weaknesses, potential threats, and risks.

In a physical penetration test, Canary Trap's SMEs attempt to breach an organization's physical security measures to evaluate the effectiveness of the security controls, policies, and procedures protecting physical assets such as buildings and data centers.

These assessments help to ensure robust protection against unauthorized access and improve the resilience of your physical security infrastructure, policies and procedures.

According to the National Center for Education Statistics, strong physical security is crucial for cybersecurity professionals to ensure effective information security.

Canary Trap will identify gaps, vulnerabilities and weaknesses that could potentially be exploited by bad actors. Our SMEs will leverage real world experience that helps guide their comprehensive approach to understanding how bad actors can bypass security controls to gain unauthorized access to sensitive and secure areas.

At the end of the engagement, Canary Trap will deliver a comprehensive Report of Findings. We will highlight identified vulnerabilities and make recommendations on how you can improve your physical security.

Canary Trap combines human expertise with sophisticated tools, proven methodologies and, where appropriate, threat intelligence to ensure a thorough, in-depth approach to security testing, advisory and assessments.
