

Catching Vulnerabilities & Trapping Exploits

Canary Trap's elite team of security experts come armed with the tools, experience and credentials to help improve your organization's security resiliency and cyber risk posture.

WEB & MOBILE APPLICATION PENETRATION TESTING

Hardening your business-critical web and mobile applications.

SERVICE OVERVIEW

Businesses of all shapes and sizes depend more and more on websites, web and mobile applications as tools for commerce, customer engagement and data collection. These digital assets have evolved to become valuable targets for cybercriminals and, as such, need to be secured.

A 2023 report by NTT Application Security shows that 50% of all web applications are vulnerable to attack. Organizations continue to struggle against the rising tide of web application attacks.

Canary Trap's Subject Matter Experts (SMEs) will put your web and mobile applications to the test. We follow industry accepted best practices and adhere to the Open Web Application Security Project (OWASP) and Penetration Testing Execution Standard (PTES) technical guidelines. To ensure a high standard of security, web and mobile applications should be regularly tested. When performed regularly, penetration testing will illuminate vulnerabilities for remediation before adversaries can locate and exploit them.

At the end of the engagement, Canary Trap will deliver a comprehensive Report of Findings. We will highlight identified vulnerabilities along with any associated opportunities to improve security and mitigate cyber risk.

Canary Trap combines human expertise with sophisticated tools, proven methodologies and, where appropriate, threat intelligence to ensure a thorough, in-depth approach to security testing and assessments.

Report of Findings

Canary Trap will deliver a Report of Findings highlighting any identified vulnerabilities for remediation.

The Canary Trap Approach

- ✓ Step 1: Define
- ✓ Step 2: Uncover
- ✓ Step 3: Report
- ✓ Step 4: Remediate
- ✓ Step 5: Retest
